

Ear Piercing at Cary/Apex/Fuquay-Varina Pediatrics

Aftercare Instructions

- Cleanse the front and back of the ear at least twice a day with rubbing alcohol and inspect for signs of infection.
- “Spin” or “Twist” the earrings daily.
- Do not remove the earrings for six weeks from the date of insertion.
After six weeks earrings can be removed, cleaned and reinserted.
- Do not replace with a different earring for the first six months to ensure a complete healing of the earring hole as the starter earring contains a larger post.

Please contact your doctor if persistent bleeding, pain or signs of infection.
